Supporting Organisation

This course provides 5 CPD credits in accordance with the CPD Scheme of the Royal College of Radiologists
This one day conference will examine how to work with digital imaging, radiology information systems and PACS to deliver the national ambition of a digital and filmless NHS. The conference will address national developments, new models of radiology care including an update from the radiology vanguard site which emphasizes a move towards a collaborative clinical network approach, getting the most out of RIS and PACs through effective workflow and systems design, and how to integrate them with other Trust systems and Electronic Patient Records. There will be a focus on improving the clinical end user experience, interoperability standards, sharing radiology images across organisations, data migration, home reporting, the role of specialty systems, the role of information systems in moving towards a 7 day service and delivering real time bedside imaging to improve patient care. There will be a pre conference supplier showcase where suppliers will be demonstrating their systems and how they can support your organization to deliver digital imaging in practice.

“There has probably never been a more exciting time to be involved in providing, managing or procuring imaging services and the coming five years will see significant changes to the way we deliver excellent radiology... Radiology services will have to change to deliver care in this proposed new system” Prof Erika Denton, Consultant Radiologist, Honorary Professor of Radiology, University of East Anglia and Norfolk & Norwich University Hospital, Former National Clinical Director for Diagnostics and Imaging NHS England, 2016

This course has been approved by The Royal College of Radiologists with 5 CPD credits
